

New from Verplas

Round PVC Pipes

The Verplas range is further enhanced by the addition of round pipes made from PVC for extra strength, durability and stability. The pipes are available in 100, 125 and 150mm diameters and each size has an outer sleeve and reducing ring to provide a telescopic section with same diameter connection at each end.

- > Made from PVC which is naturally flame retardant
- > Telescopic pipes for easy installation
- > Reducing ring allows connection to system parts at both ends
- > Available in various practical lengths.
- > Available NOW from stock.
- > UNLESS OTHERWISE REQUESTED WILL REPLACE THE CURRENT RANGE OF POLYPROPYLENE PIPES
